

Anandhu Chandran

DevOps Engineer

anandhuchandran011999@gmail.com | +91-6282532876 | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

DevOps Engineer with 3 years of hands-on experience in CI/CD, automation, containerization, configuration management, Linux administration, and cloud environments. Proficient in building and managing automated deployment workflows using Jenkins and GitHub Actions, achieving a **40%** reduction in deployment time and **60%** reduction in configuration errors. Skilled in Docker, Ansible, AWS, Kubernetes, Terraform, Liquibase, Grafana, ELK Stack, and Apache NiFi, with practical experience in deployment automation, infrastructure management, monitoring, and release processes.

TECHNICAL SKILLS

CI/CD & Version Control:	Jenkins, GitHub Actions, Self-Hosted Runners, Git, GitHub, Gitea, Release Workflows
Containers & Configuration:	Docker, Docker Compose, Multi-Stage Builds, Kubernetes (Pods, Deployments), Ansible
Cloud & Infrastructure as Code:	AWS (EC2, S3, IAM), Terraform, Linux Infrastructure Provisioning
Scripting & Operating Systems:	Bash, Groovy, Linux (Ubuntu, CentOS)
AI & Task Automation:	AI CLI Tools, Python, Shell/CLI Automation
Artifacts & Observability:	JFrog Artifactory, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)
Database & Data Pipelines:	Liquibase, Apache NiFi
Documentation & Collaboration:	Wiki.js, Slack, Runbooks, Standard Operating Procedures
Architecture:	Microservices Architecture

PROFESSIONAL EXPERIENCE

DevOps Engineer – Muziris Softech (P) Ltd

Mar 2024 – Present

- CI/CD Pipeline Engineering:** Architected and maintained declarative CI/CD pipelines using Jenkins and Groovy, standardizing build and deployment automation across multi-environment infrastructures and reducing deployment cycle times by **40%**.
- Deployment Automation with GitHub Actions:** Implemented GitHub Actions continuous deployment workflows utilizing self-hosted runners to execute automated deployments directly within target client server environments, eliminating manual intervention and enforcing release consistency.
- Configuration Management & Provisioning:** Formulated modular Ansible playbooks to automate server provisioning and application rollouts, reducing manual configuration errors by **60%** and ensuring environment repeatability.
- Containerization & Runtime Automation:** Containerized microservices applications using Docker with multi-stage builds, automating container lifecycle management, container restart routines, and operational health checks for multi-environment parity.
- ChatOps & CI/CD Visibility:** Integrated Jenkins with Slack to automate daily build trigger workflows, sprint-plan branch creation routines, and real-time build log delivery, significantly improving operational visibility and team response times.
- Artifact Lifecycle Management:** Managed build versions, binary dependencies, and release packages with JFrog Artifactory, establishing end-to-end traceability and seamless rollback capabilities across deployment stages.
- Database DevOps Automation:** Implemented Liquibase to automate database schema migrations and version-controlled change tracking, mitigating schema drift and removing manual database update bottlenecks.
- Centralized Observability & Logging:** Built real-time monitoring dashboards using Grafana and established centralized log aggregation using the ELK Stack, streamlining post-deployment service verification and log inspection.
- Data Pipelines & Documentation:** Configured automated data flows using Apache NiFi for backend data ingestion, and deployed Wiki.js to establish a centralized DevOps knowledge base and runbook repository.
- Day-to-Day Automation Scripting:** Authored modular Bash and Groovy automation scripts to eliminate repetitive day-to-day administrative tasks, container maintenance, and environment verification checks.
- AI-Assisted Task Automation:** Used AI CLI tools with Python and command-line utilities to automate repetitive operational tasks, scripting, and workflow support.
- Cloud & Container Orchestration:** Administered containerized workloads using Kubernetes (basic) for deployment management, and practiced infrastructure provisioning using Terraform for AWS EC2 and S3 resources.

Software Version Controller – Muziris Softech (P) Ltd

May 2022 – Feb 2024

Version Control | Git | Gitea | Linux Administration | Release Workflows | CI/CD Adoption

- **Repository Administration & Version Control:** Managed enterprise Git and Gitea repositories across development teams, establishing structured branching strategies, release tags, and automated conflict-free workflows.
- **Linux Environment Optimization:** Configured and tuned Linux (Ubuntu, CentOS) staging and production servers, managing system permissions, cron jobs, and background services to guarantee runtime reliability and uptime.
- **Release Coordination & Reliability:** Partnered closely with engineering teams to transition legacy manual release steps into standardized, version-controlled procedures, improving deployment reliability.
- **Maintenance Automation Scripting:** Created custom Bash automation scripts to streamline routine server maintenance, environment health checks, and build artifact archiving, significantly reducing manual operational overhead.
- **DevOps Culture & Documentation:** Championed version control standards, continuous integration concepts, and standardized release documentation via Wiki.js, establishing continuous delivery best practices.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science and Engineering

2016 – 2020

Mangalam College of Engineering, Ettumanoor

Higher Secondary Education (Class XII)

2014 – 2016

Govt. Tribal Higher Secondary School, Murikkattukudy
